Advanced Technology in Radiation Oncology

Image Guided Radiation Therapy – IGRT –

Uses images to increase the accuracy of patient setups. Allows radiation to be precisely targeted to the tumor.

Cone Beam Imaging –

The first system in San Antonio with advanced technology that uses CT scans to improve the accuracy of radiation to the tumor.

On Board Imaging –

Imaging that improves the accuracy of the radiation treatments.

Intensity Modulated Radiation Therapy – IMRT –

Delivers high doses of radiation targeted precisely to the tumor while avoiding the healthy tissue.
